PROFILE

Full-stack engineer and consultant with **4+ years** of experience, focused on **Angular** and **.NET**. Works end-to-end on web applications: frontend (Angular, PrimeNG, Bootstrap), backend (.NET Core/.NET 5–10, microservices), and infrastructure (Docker, NGINX, Azure). Heavily involved in modernizing legacy systems, building GDPR-compliant platforms, and designing internal CRMs and public portals. Main concerns: **performant apps**, **strong typing** and **accessibility**.

SKILLS

Frontend	Angular (Standalone, Zoneless, up to v21) • PrimeNG • Bootstrap 5 • Carbon v11 • HTML5 • CSS3 • RxJS • Signals • Accessibility (WCAG 2.1)
Backend & APIs	.NET 5–10 • .NET Core • REST APIs • Entity Framework • Microservices • Azure Functions
DevOps & Cloud	Azure DevOps • GitLab CI/CD • Docker • NGINX • Azure App Service • Static Web Apps • Logic Apps • Function Apps
Other	Git • JIRA • GitLab Kanban • NuGet Packaging • Software Architecture • Clean Code • Code Review

PROFESSIONAL EXPERIENCE

Software Developer Consultant — Conkord

Fundão, Portugal • September 2021 – Present

Full-stack consultant on enterprise web apps using Angular, .NET, and Azure. Covers frontend, backend microservices, and CI/CD infrastructure.

Frontend Development

- Developed CRM systems and public portals including a barcode-based membership acquisition platform and an internal CV/profile generator.
- Implemented dynamic reactive forms with Portuguese IBAN and Fiscal Number validation, input masking and real-time formatting.
- Introduced Angular animations, skeleton loaders, modals and toast notifications to improve UX and perceived performance.
- Built token refresh mechanisms via HTTP interceptors and client-side caching to reduce redundant API calls.
- Led migration of Angular 7 codebase (Bootstrap 4, jQuery, PrimeNG) to Angular 19 — Standalone Components, lazy-loaded routes, full TypeScript typification.
- Migrated older Angular apps to modern patterns: Zoneless, OnPush, Signals.

GDPR Consent Management Platform

- Built a GDPR platform with a static Angular 18 frontend and a .NET microservice backend hosted on Azure via Docker.
- Designed secure endpoints to register, fetch and update user consent configurations.
- Developed responsive tabbed forms with loading states and confirmation modals, tuned for performance and accessibility.

Microservices & Infrastructure

- Created .NET Core microservices: Mailchimp sync, barcode processing, GDPR tagging.
- Migrated solutions from .NET Framework to .NET Core.
- Developed Azure Function Apps and integrated Logic Apps with Blob Storage for error logging and webhook debugging.

Municipal Transport Platform

- Co-led technical architecture of a municipal transport platform.
- Set up Docker containers, NGINX configuration, and CI/CD pipelines with GitLab.
- Managed task tracking via GitLab Kanban and performed code reviews.

- Supported Angular development for authentication logic and map integration.

MAJOR MIGRATION PROJECTS

Angular 7 → Angular 19 Modernization

- Migrated Angular 7 to Angular 19 with Bootstrap 4→5 and PrimeNG updates.
- Converted architecture to Standalone Components with lazy-loaded routing.
- Fully typified the legacy codebase and applied WCAG 2.x accessibility standards.
- Refactored the generic REST architecture used across the app.

Angular 15 (IBM Carbon v10) → Angular 21 (Carbon v11)

- Migrated to Standalone Components; converted from ZoneJS to zoneless with Signals and OnPush.
- Upgraded step-by-step from Angular 15 to 21, handling all breaking changes.
- Improved accessibility (WCAG), refactored layout for full responsiveness, implemented lazy loading.
- Moved business logic into services to improve clarity and testability.

.NET Project Libraries → .NET 8 & .NET 10

- Built Azure DevOps pipelines to rebuild and publish all library versions to a private NuGet feed.
- Cleaned legacy .NET libraries and created .NET 8 and .NET 10 versions for all internal packages.

.NET 5 Microservices → .NET 10

- Upgraded multiple microservices from .NET 5 to .NET 10.
- Updated NuGet packages, refactored outdated controller validations, removed deprecated libraries.

.NET Framework SOAP Services → .NET 10 REST API

- Refactored a .NET 4.6 Framework SOAP service to a REST API.
- Standardized API flow to Controller → Service → Repository pattern.
- Optimized badly performant SQL queries to indexable and SARGABLE queries.
- Added CI/CD, converted from Windows to Linux and Docker support.

Fintech Developer — Santander

Internal development tasks for banking/fintech systems following strict security, compliance, and audit requirements.

EDUCATION

Bachelor's Degree — Computer Engineering

Universidade da Beira Interior • September 2018 – July 2021

Topics: Algorithms, Data Structures, Databases, Dependency Injection, Android, OpenGL • **Technologies:** C, C++, OCaml, JavaScript, HTML, CSS, Java, SQL, WebAssembly

CERTIFICATIONS

- Complete SEO Course – From basic to advanced
- Angular Styling & Animations (Angular 2+)
- Introduction to Web Accessibility – WCAG 2.1

LANGUAGES

- **Portuguese:** Native / Bilingual
- **English:** Professional working proficiency
