PROFILE

Full-stack engineer and software developer consultant with **4+ years** of experience, focused on **Angular** and **.NET**. I work end-to-end on web applications: frontend (Angular, PrimeNG, Bootstrap), backend (.NET Core/.NET 5-10, microservices), and infrastructure (Docker, NGINX, Azure).

I've been heavily involved in **modernizing legacy systems**, building **GDPR-compliant platforms**, and designing internal CRMs and public-facing portals. I also manage **CI/CD pipelines** (Azure DevOps, GitLab), set up infrastructure (Docker, NGINX, Azure), and participate in code reviews.

My main concerns are **Performant Apps**, **strong typing** and **accessibility**.

SKILLS

Frontend

Angular (Standalone Components, Zoneless, up to v21), PrimeNG, Bootstrap 5, Carbon v11, HTML5, CSS3, RxJS, Responsive Design, Animations, Accessibility (WCAG 2.1)

Backend & APIs

.NET 5-10, .NET Core, REST APIs, Entity Framework, Microservices, Azure Functions

DevOps & Cloud

Azure DevOps, GitLab CI/CD, Docker, NGINX, Azure App Service, Static Web Apps, Storage, Logic Apps, Function Apps

Other

Git, JIRA, GitLab Kanban, NuGet Packaging, Software Architecture, Clean Code, Code Review

CERTIFICATIONS

- ✓ Complete SEO Course – From basic to advanced
- ✓ Angular Styling & Animations (Angular 2+)
- ✓ Introduction to Web Accessibility – WCAG 2.1

LANGUAGES

- ✓ **Portuguese:** Native / Bilingual
- ✓ **English:** Professional working proficiency

PROFESSIONAL EXPERIENCE

Software Developer Consultant — Conkord

Fundão, Portugal • September 2021 – Present

Full-stack consultant working on enterprise web applications using **Angular**, **.NET**, and **Azure**, with responsibilities covering frontend development, backend microservices, and CI/CD/infrastructure.

Frontend Development

- Developed **CRM systems** and public portals, including a barcode-based membership acquisition platform and an internal CV/profile generator.
- Implemented **dynamic, reactive forms** with Portuguese IBAN and Fiscal Number validation, input masking and real-time field formatting.
- Introduced UI enhancements with **Angular animations**, skeleton loaders, modals, and toast notifications.
- Built **token refresh mechanisms** using Angular HTTP interceptors and implemented client-side caching.
- Led the migration of an **Angular 7** codebase to **Angular 19**, refactoring to Standalone Components, lazy-loaded routes, and typed templates.
- Migrated older Angular apps to modern patterns (Zoneless, onPush, Signals).

GDPR Consent Management Platform

- Built a GDPR platform with a **static Angular 18** frontend and a **.NET microservice** backend hosted in Azure using Docker.
- Designed secure API endpoints to register, fetch, and update user consent configurations.
- Developed responsive tabbed forms with loading states and confirmation modals.

Microservices & Infrastructure

- Created **.NET Core microservices** for email syncing with Mailchimp, barcode processing, and GDPR tagging.

- Migrated solutions from **.NET Framework** to **.NET Core**.
- Developed **Azure Function Apps** and integrated Logic Apps with Blob Storage for error logging.

Municipal Transport Platform

- Co-led technical architecture, set up **Docker containers**, NGINX configuration, and **CI/CD pipelines with GitLab**.
- Managed task tracking using GitLab Kanban and performed code reviews.

MAJOR MIGRATION PROJECTS

Angular 7 → Angular 19 Modernization

Migrated to Angular 19 with Bootstrap 4 → 5, converted to Standalone Components, implemented lazy-loaded routing, applied WCAG 2.x accessibility standards, and fully typified the legacy codebase.

Angular 15 (IBM Carbon v10) → Angular 21 (Carbon v11)

Converted ZoneJS app to zoneless with signals and onPush, refactored for full responsive behavior, improved accessibility (WCAG), and implemented lazy loading for components and routes.

.NET Project Libraries → .NET 8 & .NET 10

Built Azure DevOps pipelines to rebuild and publish all library versions to a private NuGet feed. Created .NET 8 and .NET 10 versions for all internal packages.

.NET 5 Microservices → .NET 10

Upgraded multiple microservices, updated NuGet packages to secure versions, refactored outdated controller validations.

FINTECH — SANTANDER

Worked on internal development tasks for **banking/fintech systems**, following strict security, compliance, and audit requirements.

EDUCATION

Bachelor's Degree — Computer Engineering

Universidade da Beira Interior • September 2018 – July 2021

Topics: Algorithms, Data Structures, Databases, Dependency Injection, Android, OpenGL

Technologies: C, C++, OCaml, JavaScript, HTML, CSS, Java, SQL, WebAssembly
